

Environmental Policy

Our vision is to create a sustainable and humane society through digitalization and innovation. For us, this means that sustainability and an environmental perspective are fundamental and a natural part of the dialogue with our employees, clients, partners, and owners. We strive to be recognized for our efforts in creating a better environment.

As makers of a sustainable future, we believe our greatest potential to make a difference to the environment lies in our ability to support and drive our customers towards sustainable and value-based business models. We strive to contribute with increased insight and clear recommendations in all our client assignments.

Taking responsibility for our own environmental impact is a natural part of our efforts. We pay attention to the environmental perspective in decisions and design of internal processes and strive to create conditions for our employees to contribute to sustainability within their role and responsibility. Knowit applies and adheres to applicable legislation and mandatory requirements.

We set our goals to challenging levels and frequently evaluate our accomplishments and performance to seek opportunities to improve our ways of working and to further reduce the negative environmental impact.
